

Towards a classification of DSLs

Mikhail Barash

University of Turku

Finland

OOPSLE 2020

Existing classifications

R. Lämmel, "Software languages"

| | |
|-----------------|---|
| paradigm | imperative, functional, object-oriented, logic |
| type system | static typing, dynamic typing, duck typing, ... |
| purpose | programming, querying, modeling, logging, ... |
| generality | |
| representation | strings, trees, graphs |
| notation | textual, markup, visual |
| declarativeness | rule-based, constraint-based, ... |

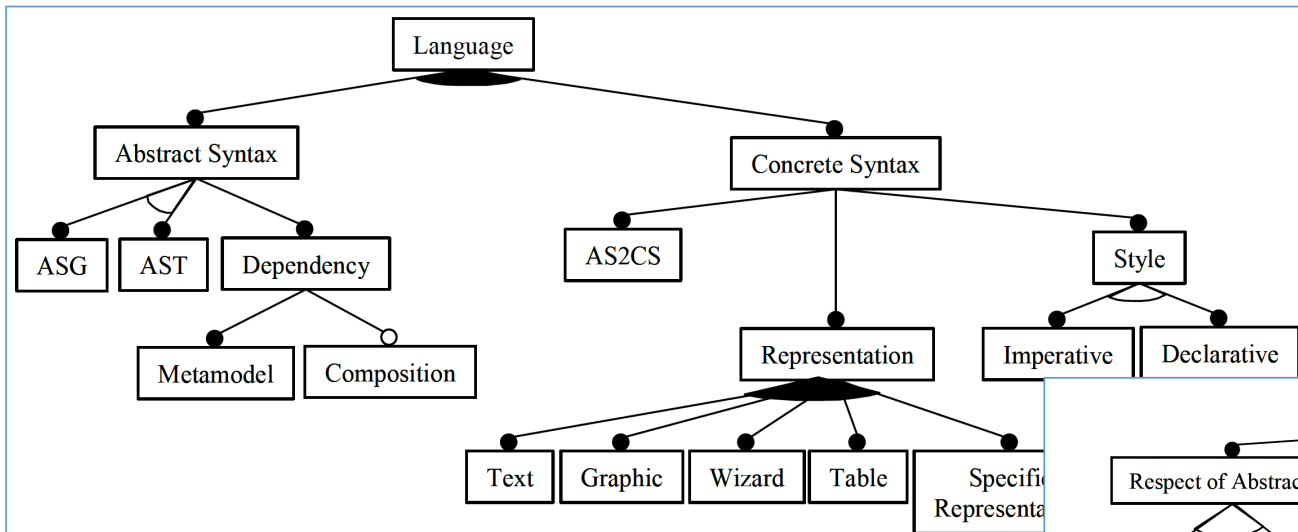

Figure 3. Language Features

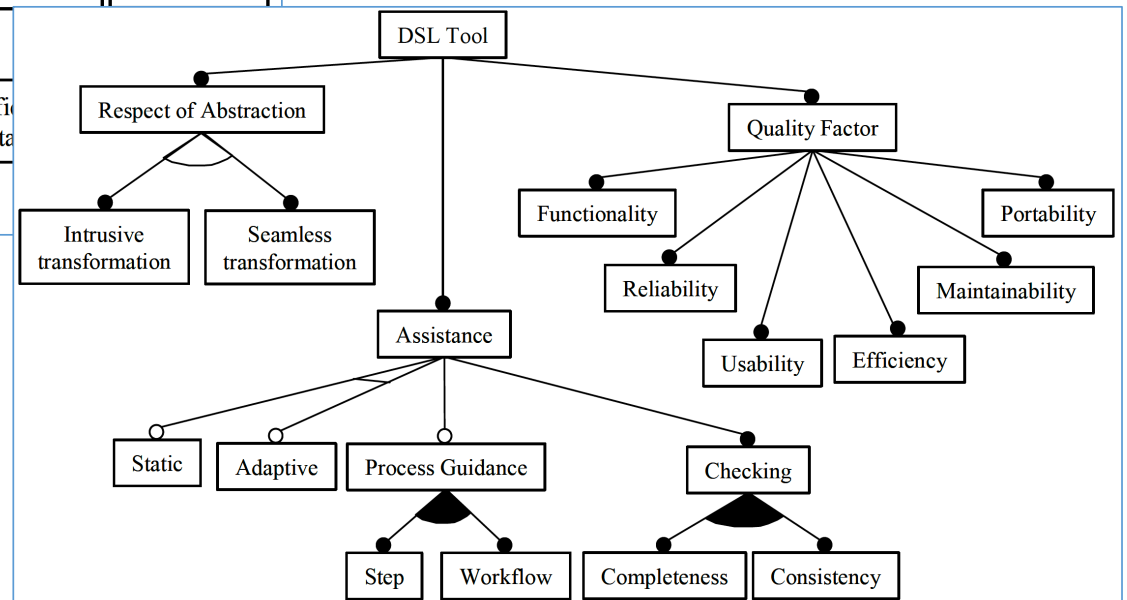

Figure 8. DSL Tool Features

TABLE I. DSLS FOR MACHINE LEARNING IN BIG DATA

| <i>Language Name</i> | <i>Requirements / Programming / Modeling</i> | <i>Textual / Graphical</i> | <i>Internal / External</i> | <i>Dynamically typed / Statically typed</i> | <i>Imperative / Declarative</i> | <i>Translation / Interpretation</i> | <i>Target Platform / Execution Engine</i> | <i>Descriptive model / Prescriptive model</i> | <i>Supports Vector (V) / Matrix (M) / Graph (G) operations</i> | <i>Supports Parallel operations</i> | <i>Supports Distributed (D) / Cloud (C) computing</i> |
|------------------------------|--|----------------------------|----------------------------|---|---------------------------------|-------------------------------------|---|---|--|-------------------------------------|---|
| OptiML [62] | Programming | Textual | Internal (Scala) | Statically typed | Declarative | Translation | - | - | V/M/G | Yes | -/- |
| ScalOps [71] | Programming | Textual | Internal (Scala) | Statically typed | Declarative | Translation | - | - | V/M/G | Yes | D/C |
| Pig Latin [51] | Programming | Textual | External | Dynamically typed | Imperative | Translation | Pig Latin compiler / Apache Pig | - | V/M/- | Yes | D/C |
| SCOPE [13] | Programming | Textual | External | Dynamically typed | Declarative | Translation | SCOPE Compiler / Cosmos Execution Environment | - | V/M/- | Yes | D/C |
| Sawzall [52] | Programming | Textual | External | Statically typed | Imperative | Interpretation | Sawzall compiler / Sawzall engine (proprietary) | - | V/M/- | Yes | D/C |
| VisuML [6] | Modeling | Graphical | External | - | - | - | - | Descriptive | - | - | - |
| Graphical models [27] | Modeling | Graphical | External | - | - | - | - | Descriptive | - | - | - |

TABLE II. FRAMEWORKS FOR MACHINE LEARNING IN BIG DATA

| <i>Framework name</i> | <i>Textual / Graphical</i> | <i>Languages</i> | <i>Supports Vector (V) / Matrix (M) / Graph (G) operations</i> | <i>Supports Parallel operations</i> | <i>Supports Distributed (D) / Cloud (C) computing</i> |
|-----------------------|----------------------------|--------------------------|--|-------------------------------------|---|
| Infer.net [47] | Textual | .NET framework languages | V/M/- | Yes | -/- |
| Graphlab [41] | Textual | C++, Python | V/M/G | Yes | D/C |
| TensorFlow [1] | Textual | C++, Python | V/M/G | Yes | D/C |
